We are watching Maker (MKR) token that entered to top 30 market cap coins on these last days. We are analyzing their features to understand if the project is solid.

OUR METHOD

All the ratings here are made with quantitative informations.

By this way we don't work with informations around the development of the tokens technology, or even the specialized media information about what's goin on.

On the other side, this method can bring objective analysis so, then, we can compare all the tokens under the same rule.

Also, we evaluate with numbers what the method predicts compared with what happens next.

So we can calibrate the weights and make this information week by week better and better.

We hope this report is valuable to your trade or hodl decisions!
